Abstract—A Covid-19 vaccine registration form collect all the necessary data from you.

ⁿ

Index Terms—Html,Css.

REFERENCES

I. INTRODUCTION

a mild to severe respiratory illness that is caused by a coronavirus (Severe acute respiratory syndrome coronavirus 2 of the genus Betacoronavirus), is transmitted chiefly by contact with infectious material (such as respiratory droplets) or with objects or surfaces contaminated by the causative virus, and is characterized especially by fever, cough, and shortness of breath and may progress to pneumonia and respiratory failure. Vaccine Registration form will let you get vaccine.

II. LITERATURE REVIEW

Vaccination against COVID-19 is the most effective way to reduce deaths and severe illness from infection.

Like all medicines, these vaccines can have side effects (also known as adverse events). The overwhelming majority are mild and resolve within a few days. The TGA closely monitors reports of suspected side effects. Importantly, adverse events reported to the TGA are often not caused by the vaccine itself. Learn more about causality.

III. PROPOSED METHODOLOGY

COVID-19 Vaccine Registration Form is developed by the COVID-19VaccineRegForm.html. It can create the registration gui form to record the users' information, like first name, last name, DOB, contact information, email address, and home address etc. People can use it to make an appointment for receiving vaccines. By run this file, after typing your basic information, it records customers' data and saves.

IV. FUTURE WORK

I will add mySQL program to store data. In Covid-19 vaccine registration form , I will add back-end work.

ACKNOWLEDGMENT

I would like to thank my honourable **Khan Md. Hasib Sir** for his time, generosity and critical insights into this project.
